Public lecture on how bio-bricks were made from urine

15 November 2018 | 17:00 for 17:30 | Lecture Theatre 3B, Snape Building, Upper Campus, University of Cape Town

Dr Dyllon Randall, who is part of the team that created the world's first bio-brick made out of urine, will present a public lecture which will outline more about how the bio-brick was created.

He will answer common questions, including why this bio-brick was conceptualised, it's strength and whether it is commercially viable.

Dr Randall is a senior lecturer on Water Quality Engineering at UCT and a trained chemical engineer.

Media interested in attending the public lecture are requested to RSVP by 13 November 2018 via email to mary.hilton@uct.ac.za.

Read the [media release](#) on the world's first bio-brick made using human urine.
